ODDITIES OF SCIENCE.

A French naval engineer has brought out a new method of converting petroleum and other oils into a hard, homogeneous mass, suitable for fuel on board warships and suitable for fuel on board warships and other large occan-going boats. It is claimed fliat this material is affected neither by heat nor cold, and is absolutely smokeless and odorless. The cakes, when set on fire, best. They require very little draft and make not more than 2 or 3 per cent of ashes. They can be made in any size or shape and can be stored anywhere without danger, as they cannot evaporate or cause an explosion. It is said that a man-of-war having 1,000 tons of this solidified oil on board could sail around the worldor remain at sea for months together. One ton represents thirty tons of coal, and the cost is at sea for months operator. One this repeats that the cost is not more than \$10 per ton. It is calculated that in the manufacture of steel five hundred weights of solidified petroleum, costing a little over \$2, would meit a ton of metal. This is not by any means the first time the discovery of such a supreme boon to naval engineers as a light and effective substitute for coal has been announced, but the actual substitute did not material-

The ingredients are to be put in a suitable cask, the sugar first, and after they are thoroughly mixed the water is to be added. After eight days of infusion the mixture is to be strained into bottles and strongly corked. In four days it is ready for use. It is explained that this drink will have no particular charm for the moderate drinker, but it looks like white wine and tastes much like chanpagne. The man who has an undue craving for intoxicating liquors drinks it with relish, and, it is declared, no harm follows The cost of this decortion is put at 2 cents a quart.

Among the carlosties which have been found in the istimus of Tehuantepec, lately explored by naturalists, is a botanical clock. It is a flower somewhat resembling in its habits the chameleon, although more methodical. In the morning it is white, at noon if is red and at night blue, and thealterations of color are so regular that the time of day can be told from the tint of the flower. It has been suggested that if it could be acclimated in a temperate zone it would be a very useful flower in public parks.
